

Trade Show-to-Pipeline Operating System for Industrial B2B Manufacturers Playbook

Replace badge-scan vanity metrics with a governed, CRM-integrated, relationship-to-revenue system that captures high-intent engagement, enables in-booth quoting/ordering, and proves pipeline influenced and revenue attributed within 30 days of every show.

Trade Show-to-Pipeline Operating System (TS-POS) for Industrial B2B Manufacturers (Enterprise 2026 Playbook)

A governed, CRM-integrated system that turns booth interactions into measurable pipeline influenced, opportunities created, and revenue attributed—while enabling frictionless in-booth quoting/ordering and year-round relationship nurturing.

1. Executive Summary

Industrial trade shows remain a top evaluation channel in 2026—29% of B2B buyers still rely on trade shows and conferences to evaluate solutions—but the definition of “success” has changed. The market is moving decisively away from badge-scan volume and toward “return on relationships” and pipeline/revenue attribution (Perenso; EMCO Outdoor). At the same time, buyers are attending fewer events (GlobalSpec: 75% attend at least one, only 55% attend two+, down from 70%), which compresses your window to create meaningful engagement and makes every booth interaction more valuable—and more competitive.

This blueprint is for enterprise industrial manufacturers and distributors with complex SKUs, multi-stakeholder buying groups, and long sales cycles who need a repeatable, auditable way to convert trade show spend into pipeline outcomes. It provides an implementation-ready operating system: governance, data standards, booth workflows, CRM/MAP integration, behavioral scoring, in-booth quoting/ordering, and closed-loop attribution from contact !' account !' opportunity !' revenue .

By executing this playbook, you will (1) eliminate “scan-and-go” obsolescence by proving pipeline influenced and revenue attributed, (2) reduce buying friction by enabling commerce-like in-booth quoting/ordering with real-time inventory visibility, (3) protect attribution integrity with enterprise-grade data governance to counter 30% annual data staleness and 90% database decay within three years (Pipeline360 via Demand Gen Report), and (4) de-risk event volatility (cancellations up to 1.5% in Q2 2025) with contingency activations and flexible portfolio strategy.

2. The Strategic Opportunity (2026 Market Analysis)

2.1 Market Gap Analysis

The problem (2026 reality):

- 1) “Scan-and-go” is obsolete: Exhibitors are being held accountable for pipeline influenced and revenue attributed, not lead volume (Perenso; EMCO Outdoor). Many industrial exhibitors still rely on badge scans and post-show spreadsheets, which cannot credibly connect engagement to pipeline.
- 2) On-floor buying friction is now unacceptable: Buyers expect a seamless, digital-commerce-like experience in the booth—complex ordering, real-time inventory, deal negotiation (Perenso). Most industrial booths still use paper notes, disconnected quoting tools, or “we’ll follow up later,” which loses momentum.
- 3) Data decay breaks follow-up and attribution: With 30% of B2B data going stale annually and 90% outdated within three years (Pipeline360), event data captured without governance quickly becomes unusable—duplicates, wrong accounts, missing consent, and misrouted follow-up.
- 4) Event volatility requires risk management: Rising costs, geopolitical/visa uncertainty, and 1.5% cancellation rates mean you need contingency workflows and flexible terms (EMCO Outdoor).
- 5) Selective attendance increases competition: Fewer events per buyer means fewer chances to earn attention; you must maximize relationship depth per interaction (Finn Partners; GlobalSpec).

Why existing solutions are inadequate:

- Badge scanners + basic lead apps capture contact info but not the engagement context needed for relationship-to-revenue attribution (dwell time, demo depth, buying group role, next step, product interest, urgency).
- Manual booth notes do not scale, are not governed, and cannot be reliably mapped into CRM objects (Account, Contact, Opportunity, Campaign Member) with consistent statuses.
- Disconnected quoting/ERP tools prevent real-time inventory visibility and in-booth quote creation, violating the 2026 expectation of frictionless buying.
- CRM campaigns without governance fail because of inconsistent naming, missing member statuses, poor account matching, and lack of SLAs.

Size of opportunity (data-backed):

- Trade shows remain a key evaluation channel (29% rely on them), but budgets are increasingly selective and ROI-driven (Finn Partners; EMCO Outdoor). This creates a “prove it or lose it” environment where a TS-POS becomes a budget-protection and growth lever.
- The shift from lead volume to pipeline influenced/revenue attributed is directly tied to securing larger 2026 budgets (EMCO Outdoor). Organizations that operationalize attribution will win internal budget battles.

2.2 Core Revenue Model

This blueprint is designed for an enterprise manufacturer implementing internally, but it also supports a repeatable internal “event revenue engine” model.

Primary revenue stream (enterprise impact): Trade show spend !' attributable

- Pricing recommendation (internal business case framing): Treat TS-POS as a program with an annual operating budget equal to 3–8% of total event spend (software + ops + enablement), justified by improved conversion and attribution.

- Value capture mechanism:

- Increase SQL rate from event-sourced contacts via behavioral scoring and fast follow-up.
- Increase opportunity creation during/within 14 days via in-booth quote creation and scheduled next steps.
- Increase win rate via better buying group mapping and post-show nurture.

Secondary monetization opportunities (if you are a distributor/manufacturer with channel ecosystem):

- Co-marketing / MDF optimization: Use attribution to negotiate better MDF allocations with principals or to justify co-funded activations.
- Sponsored content library: Extend “sponsorship” beyond the show with branded livestreams/on-demand demos (EMCO Outdoor), then attribute influenced pipeline to those assets.
- Customer expansion engine: Use TS-POS to drive renewals/upsells by scheduling executive briefings and service reviews at shows.

Realistic revenue projections (Year 1–3) — enterprise scenario model

Assumptions (adjust to your baseline):

- 8 major shows/year
- \$250k average fully-loaded cost/show (booth, travel, sponsorship, freight)
- Average deal size: \$150k
- Baseline event-sourced opp creation: 40 opps/year
- Baseline win rate: 25%

Year 1 (implementation + stabilization):

- Improve opp creation by +25% (better qualification + SLAs + in-booth quotes)
- Improve win rate by +2–4 points (buying group mapping + better follow-up)
- Incremental revenue:
 - Opps: 40 !' 50
 - Wins: 25 % !' 28 %
 - Revenue: 50 28% \$150k = \$2.1M vs baseline 40 25% \$150k = \$1.5M
 - Incremental: ~\$600k

Year 2 (scale + optimization):

- Opp creation +50% vs baseline; win rate +5 points
- Revenue: 60 30% \$150k = \$2.7M
- Incremental vs baseline: ~\$1.2M

Year 3 (mature attribution + in-booth commerce):

- Opp creation +75% vs baseline; win rate +7 points
- Revenue: 70 32% \$150k = \$3.36M
- Incremental vs baseline: ~\$1.86M

These projections align with 2026's budget reality: programs that prove pipeline and revenue attribution get expanded; those that can't get cut (EMCO Outdoor; Perenso).

2.3 Competitive Landscape

Competitor categories:

- 1) Legacy lead capture (badge scanners, basic apps): Good at collecting contacts; weak at relationship depth, governance, and attribution.
- 2) Event platforms: Increasingly provide engagement signals (session attendance, dwell time, interactions) and CRM feeds (EMCO Outdoor), but often lack industrial-specific workflows (complex SKUs, quoting, inventory, approvals).
- 3) CRM-only approaches: Strong system of record, but weak at booth usability, offline mode, and rapid capture; often fail due to poor field design and staff adoption.
- 4) Industrial field sales tools (ordering/CPQ/OMS): Strong at ordering, but not designed for event capture, consent, and marketing attribution.

Weaknesses you can exploit (enterprise positioning):

- Lack of closed-loop attribution from engagement !' pipeline influenced !' re
- Lack of data governance at point of capture (duplicates, missing consent, wrong account).
- Lack of in-booth commerce workflows (quote/order + inventory visibility).
- Lack of risk management (cancellation contingencies, flexible portfolio).

Unique positioning strategy:

Position TS-POS as an enterprise operating system (not a tool):

- Governed data capture (compliance + quality) to counter 30% annual staleness.

- Behavioral engagement scoring synced to CRM for prioritization.
- In-booth quoting/ordering to eliminate friction.
- Board-ready reporting: pipeline influenced, opportunities created, revenue attributed, cost per influenced dollar, and risk-adjusted ROI.

3. Implementation Roadmap

Phase 1: Foundation (Days 1–30)

Objective: Define the enterprise scoreboard, governance, data model, and booth workflows so every interaction becomes an attributable relationship milestone—while preparing the tech stack for real-time capture and follow-up.

Week 1: Executive Alignment + Scoreboard Definition (Pipeline, Not Leads)

Day 1–2: Establish governance and decision rights (RACI + steering cadence)

1. Appoint an Event Revenue Owner (typically VP Marketing Ops or Revenue Ops) accountable for pipeline attribution.
2. Create an Event Revenue Steering Group: Sales Ops, Marketing Ops, CRM Admin, Data/Privacy, Regional Sales Leaders, and (if applicable) Channel/Distributor Ops.
3. Define RACI:
 - Responsible: Marketing Ops (campaign setup), Sales Ops (routing + SLAs), Booth Manager (execution), Data Steward (quality)
 - Accountable: Event Revenue Owner
 - Consulted: Legal/Privacy, IT Security, Finance
 - Informed: Executive team
4. Set cadence: weekly during build, daily during show week, then weekly for 4 weeks post-show.

Day 3–4: Define the 1-page “Event Scoreboard Spec” (board-ready)

Build a single-page document with:

- KPIs and formulas:
 - Pipeline Influenced (\$)
 - Opportunities Created (#/\$)
 - Revenue Attributed (\$)

- Meetings Held (#)
- SQL Rate (%)
- Tier-1 Follow-up SLA compliance (%)
- Definitions:
 - “Event-sourced” vs “event-influenced”
 - Attribution window (recommended: 180 days for influenced, 365 for revenue in long-cycle industrial)
- Owners and reporting frequency

Day 5–7: Baseline and targets (using last 2–4 shows)

1. Pull prior show data: number of leads, meetings, opps, pipeline, revenue.
2. Identify data gaps (missing campaign member statuses, no account matching, etc.).
3. Set targets for the next show (see KPI table in Section 6).

Success Metric (Week 1): One signed-off Event Scoreboard Spec used by Sales + Marketing for the next show; steering group and RACI published.

Week 2: Data Governance + CRM Data Model (Stop Decay at Entry)

Day 8–9: Define required fields and controlled vocabularies

Create a “Show Capture Schema” with required fields:

- Contact: First, Last, Email (required), Phone (optional), Title, Consent status
- Account: Company name, Company domain (required), Country/State, Segment
- Engagement: Booth interaction type (demo/pricing/engineering), Product family, Use case, Buying timeframe, Next step, Owner
- Qualification: Tier (1/2/3), Meeting scheduled (Y/N), Quote requested (Y/N)

Use picklists for: industry, use case, product family, timeframe.

Day 10–11: Implement duplicate prevention + account matching rules

1. Define match keys:

- Contact match: email exact match
- Account match: domain exact match; fallback to normalized company name + country

2. Configure CRM rules:

- If email exists !' update existing contact + add campaign membership

- If new email but domain matches existing account!' attach to that account
- If no domain!' create "Unmatched Account" queue for data steward

3. Establish a Data Steward workflow:

- Daily review of unmatched accounts
- Merge duplicates within 48 hours

Day 12–14: Consent + compliance logging

Given 2026 compliance risk and data quality emphasis (Demand Gen Report):

1. Add consent fields:

- Consent captured (Y/N)
- Consent method (booth form, QR opt-in, session registration)
- Timestamp + source event

2. Create a "Value Exchange" script (see templates) to align with Perenso's point: data capture must feel rewarding, not transactional.

Success Metric (Week 2): <10% incomplete records in test captures; dedupe rules validated; consent logging implemented.

Week 3–4: Booth Workflow Design + Follow-up SLAs (Speed Wins)

Day 15–17: Build the 60-second qualification script + tiering

1. Draft script (Template provided in Section 5).

2. Define Tier criteria:

- Tier 1: active project "d6 months, decision influence, clear use case, meet
- Tier 2: 6–12 months, influencer, needs nurturing
- Tier 3: >12 months or unclear fit

3. Map tier to action:

- Tier 1: SDR/AE contact within 24 hours
- Tier 2: contact within 72 hours + nurture
- Tier 3: nurture only

Day 18–20: Pre-build routing + sequences in CRM/MAP

1. Routing logic: territory, segment, product line.

2. Create assignment queues for exceptions.

3. Build sequences:

- Tier 1: 6-touch over 10 business days (call + email + LinkedIn)
- Tier 2: 4-touch over 14 business days

4. Load templates and ensure personalization tokens.

Day 21–24: Configure campaign member statuses for closed-loop attribution

Recommended statuses:

- Registered (if applicable)
- Visited Booth
- Demo Completed
- Meeting Scheduled
- Meeting Held
- Quote Created
- SQL
- Opportunity Created
- Closed Won

Day 25–30: Booth staff enablement + dry runs

1. Train booth staff on:

- Script
- Data entry standards
- Consent language
- How to schedule meetings on the spot

2. Run role-play scenarios:

- Engineer wants specs
- Procurement asks pricing
- Executive wants strategic overview

3. Conduct a “Day-in-the-booth” simulation with the actual devices.

Success Metric (Week 3–4): 90% of booth staff pass a capture-quality test (complete fields + correct tier +

next step) in simulation; routing + sequences tested end-to-end.

Phase 2: Growth (Days 31–60)

Objective: Deploy behavioral engagement scoring, integrate event engagement signals into CRM, and launch year-round post-show content journeys to extend relationship impact beyond the 3-day event (EMCO Outdoor).

Week 5: Engagement Scoring Model (Behavior!' Priority)

Day 31–33: Define scoring inputs aligned to 2026 event platforms

Use signals cited in 2026 trends: session attendance, dwell time, interaction data (EMCO Outdoor), plus booth-specific actions.

- Booth dwell time (if available):
 - 2–5 min: +5
 - 5–10 min: +10
 - 10+ min: +20
- Actions:
 - Demo completed: +20
 - Pricing asked: +25
 - Engineering consult requested: +25
 - Quote created: +40
 - Meeting held: +30
- Content:
 - Download spec sheet: +10
 - Watch on-demand demo: +15

Day 34–35: Define score bands and actions

- 60+: SDR call within 4 business hours; AE outreach same day
- 40–59: SDR within 24 hours
- 20–39: nurture + SDR within 72 hours
- <20: nurture only

Success Metric: Scoring model approved by Sales leadership; mapped to SLAs.

Week 6: CRM Integration + Automation

Day 36–40: Implement scoring in CRM/MAP

1. Create fields:

- Event Engagement Score
- Last Event Attended
- Event Tier

2. Build automation:

- When score crosses threshold !' create task + enroll in sequence
- When meeting scheduled !' update campaign status

Day 41–42: Build “Event Pipeline Review” dashboard

Include:

- Event-sourced pipeline
- Event-influenced pipeline
- SLA compliance
- Conversion funnel by status

Success Metric: Dashboard live; automation triggers tested with sample records.

Week 7–8: Year-Round Post-Show Content Journey

Day 43–46: Build persona/application nurture tracks

Align with Demand Gen Report’s emphasis that content quality becomes a differentiator and must be produced/optimized faster.

Create 3–5 tracks (examples):

- Plant engineering / maintenance
- Operations leadership
- Procurement
- R&D / design engineering

Day 47–50: Create an on-demand content library

Following EMCO Outdoor's "on-demand content libraries" trend:

- 3-minute product overview
- 10-minute technical demo
- 2 case studies
- ROI calculator or TCO brief

Day 51–60: Launch and measure

- Send Touch 1 within 24 hours post-show
- A/B test subject lines and CTA
- Track engagement and meeting conversions

Success Metric: "e 25 % email engagement rate; "e 5 % meeting conversion from (benchmarks from your own baseline; adjust by segment).

Phase 3: Scale (Days 61–90)

Objective: Add in-booth quoting/ordering workflows with real-time inventory visibility (Perenso), mature attribution, and institutionalize data quality/compliance processes to counter data decay.

Week 9–10: In-Booth Quoting/Ordering Workflow (Remove Friction)

Day 61–63: Define "booth commerce" scope

Choose one:

- Option A (fast): Quote request + guided configuration + promised turnaround
- Option B (strong): CPQ quote creation in booth
- Option C (best): Quote + order placement with inventory visibility

Day 64–70: Implement minimum viable in-booth commerce

1. Create a "Booth Quote" record type in CRM/CPQ.

2. Required fields:

- Product family, configuration notes, quantity/UOM, target ship date
- Pricing sensitivity (budget range optional)
- Approval needed (Y/N)

3. Inventory visibility:

- If ERP integration is heavy, start with a replicated inventory snapshot updated daily.

4. Train 2–3 “Commerce Specialists” on booth staff.

Success Metric: “e10% of qualified booth interactions result in a quote creation opportunity #2).

Week 11: Closed-Loop Attribution (Relationship-to-Revenue)

Day 71–75: Enforce contact! account matching and campaign hygiene

1. Standard naming convention: FY26[ShowName][City]_[Date]
2. Mandatory campaign member status updates
3. Monthly audit: duplicates, unmatched accounts, missing consent

Day 76–80: Build multi-touch influence reporting

- Define influence rules (e.g., contact is campaign member with status “e M
- Report pipeline influenced within 30 days post-show

Success Metric: Repeatable report showing event-sourced and event-influenced pipeline within 30 days post-show.

Week 12–13: Data Enrichment + Compliance as a Differentiator

Day 81–85: Implement enrichment and stale-data workflows

Given 30% annual staleness:

- Quarterly enrichment (titles, firmographics)
- 12-month stale flag and re-verification email

Day 86–90: Consent audit and deliverability controls

- Bounce handling
- Opt-out compliance
- Consent source verification

Success Metric: “e90% deliverability on event follow-up; measurable reduction

Phase 4: Optimization (Days 91+)

Objective: Institutionalize TS-POS as a continuous revenue system with risk management, portfolio optimization, and continuous improvement.

1) Event portfolio optimization (risk-adjusted ROI)

- Tier A/B/C shows with ROI thresholds
- “Destination dupe” strategy to reduce cost while maintaining attendee value (EMCO Outdoor)

2) Volatility playbook

- Contract clauses for cancellation/transfer
- Contingency activations within 2 weeks: regional minis, webinars, customer days

3) Continuous content optimization

- Rapid ideation/production/optimization loop (Demand Gen Report)
- Repurpose show demos into on-demand assets

4) Quarterly executive review

- Pipeline influenced and revenue attributed
- Cost per influenced dollar
- SLA compliance and conversion rates
- Data quality scorecard

4. Required Tech Stack & Setup Guides

4.1 Core Platform Tools

Tool 1: Salesforce Sales Cloud (or Microsoft Dynamics 365 Sales) — System of Record

- What it does: Centralizes Accounts, Contacts, Campaigns, Opportunities, Tasks, and attribution reporting.
- Why it's essential: Closed-loop attribution requires a single source of truth mapping.
- Setup Steps:

1. Create a Campaign hierarchy for FY26 events.
 2. Add Campaign Member Status values (Visited Booth, Demo Completed, Meeting Held, Quote Created, SQL, Opp Created).
 3. Create custom fields: Event Tier, Event Engagement Score, Next Step Date.
 4. Configure assignment rules by territory/segment.
 5. Build dashboards: Event Funnel, SLA Compliance, Pipeline Influenced.
- Cost: Enterprise CRM pricing varies by edition and seats.
 - Pro Tip: Lock campaign naming conventions and status picklists—most attribution failures come from inconsistent campaign hygiene.

Tool 2: HubSpot Marketing Hub Enterprise or Marketo Engage — Marketing Automation + Nurture

- What it does: Email sequences, segmentation, landing pages, tracking, nurture journeys.
- Why it's essential: 2026 success requires year-round engagement via on-demand content libraries and measurable journeys (EMCO Outdoor).
- Setup Steps:
 1. Create event lists (attended, visited booth, demo completed).
 2. Build persona tracks and map to lifecycle stages.
 3. Set up UTM governance and tracked links.
 4. Sync campaign membership and engagement score back to CRM.
- Cost: Enterprise tiers vary.
- Pro Tip: Build a “Show Follow-up Factory” folder with cloned workflows per event to scale content speed (Demand Gen Report).

Tool 3: Event Lead Capture + Engagement Platform (e.g., Cvent LeadCapture / iCapture / atEvent / Swapcard depending on show)

- What it does: Captures leads, notes, session attendance, dwell time, interaction data.
- Why it's essential: 2026 platforms enable behavioral scoring and CRM feed integration (EMCO Outdoor).
- Setup Steps:
 1. Select platform supported by the event organizer.
 2. Configure required fields and picklists to match your Show Capture Schema.
 3. Enable offline mode and device management.
 4. Map fields to CRM objects and test sync.

- Cost: Varies by vendor and event.
- Pro Tip: Do not accept default fields—customize to enforce next step and tiering; otherwise you recreate scan-and-go.

Tool 4: CPQ/Quoting + Inventory Visibility (e.g., Salesforce CPQ, Oracle CPQ, SAP CPQ, or a lightweight quoting portal)

- What it does: Creates quotes, manages approvals, and (ideally) exposes inventory availability.
- Why it's essential: Perenso highlights that in 2026, frictionless complex ordering and real-time stock visibility are differentiators.
- Setup Steps:
 1. Define "Booth Quote" record type and simplified configuration flow.
 2. Pre-load top SKUs/configurations used at shows.
 3. Set approval thresholds (discount bands) and escalation paths.
 4. Integrate inventory snapshot (daily refresh) if real-time ERP integration is not feasible.
- Cost: Varies.
- Pro Tip: Start with the 20% of SKUs that drive 80% of show conversations; expand after adoption.

4.2 Automation & AI Layer

(Aligned to 2026 needs: faster content production, better data handling, reduced tool sprawl via governed data services.)

Automation 1: Zapier / Workato / MuleSoft (integration automation)

- Why essential: Automates lead routing, task creation, and data sync between event platforms, CRM, and MAP.
- Setup Steps:
 1. Trigger: new event lead with Tier 1.
 2. Actions: create CRM task, assign owner, enroll in sequence, send internal Slack alert.
 3. Add error handling: route failures to Data Steward queue.
- Pro Tip: Build a "Show Week" automation pack you can toggle on/off per event.

Automation 2: Data enrichment + verification (ZoomInfo / Clearbit / Cognism depending on compliance posture)

- Why essential: Counters 30% annual staleness and improves account matching.
- Setup Steps:

1. Enrich new contacts nightly during show week.
 2. Flag mismatched domains and route to steward.
 3. Quarterly refresh for titles/roles.
- Pro Tip: Enrichment without governance increases duplicates—pair with strict match rules.

Automation 3: Content production system (enterprise-approved GenAI + DAM)

- Why essential: Demand Gen Report: content quality and speed become differentiators.
- Setup Steps:
 1. Create a “Show Content Kit” prompt library (demo scripts, recap emails, case study summaries).
 2. Route outputs through brand/legal review workflow.
 3. Store approved assets in DAM with tracking links.
- Pro Tip: Treat prompts as controlled assets with versioning and approvals.

4.3 Analytics & Tracking

Analytics 1: CRM dashboards + BI (Tableau/Power BI/Looker)

- Why essential: Board-ready reporting on pipeline influenced and revenue attributed.
- Setup Steps:
 1. Create a semantic layer for event attribution.
 2. Build executive dashboard: spend, pipeline influenced, opps created, revenue attributed, ROI.
 3. Add drill-down by show, segment, territory.
- Pro Tip: Include a “data quality score” widget (duplicates %, missing consent %, unmatched accounts %).

Analytics 2: UTM governance + link tracking (GA4 + CRM campaign tracking)

- Why essential: Extends attribution into year-round content journeys.
- Setup Steps:
 1. Standardize UTM templates per event.
 2. Use short links with campaign parameters.
 3. Sync engagement back to CRM.
- Pro Tip: Lock UTM naming conventions; inconsistent UTMs destroy cross-event comparability.

5. Templates & Frameworks

5.1 Event Scoreboard Spec (1-Page Template)

`text

EVENT SCOREBOARD SPEC (FY26)

Event Name:

Event Dates:

Total Event Spend (fully loaded):

Attribution Window: Influenced = 180 days | Revenue = 365 days

PRIMARY KPIs (Board-Ready)

1) Pipeline Influenced (\$):

Definition: Sum of open pipeline where at least one buying group member has Campaign Status >= Meeting Held.

Formula:

Data Owner:

Report Frequency:

2) Opportunities Created (#/\$):

Definition: Opportunities created within 30 days of event end date with Primary Campaign Source = Event.

3) Revenue Attributed (\$):

Definition: Closed-won revenue where Primary Campaign Source = Event OR influence criteria met.

OPERATIONAL KPIs

4) Meetings Held (#):

5) Tier-1 SLA Compliance (% contacted within 24h):

6) SQL Rate (% of Tier-1 that become SQL within 14 days):

7) Quote Created During Show (#):

8) Data Quality Score (% complete, % duplicates, % consent logged):

OWNERSHIP

Event Revenue Owner:

Sales Ops Owner:

Marketing Ops Owner:

Data Steward:

NOTES / RISKS

- Event volatility contingency plan:
- Data compliance notes:

`

5.2 60-Second Booth Qualification Script (Return on Relationships)

`text

GOAL: Create a meaningful next step + capture context for attribution.

1) Context opener (10 sec)

"Thanks for stopping by—what brought you to the show and what are you hoping to improve in your operation this year?"

2) Use-case + application (15 sec)

"Which line/process is this for? What materials, throughput, or quality constraints are you dealing with?"

3) Buying group role (10 sec)

"Are you the primary evaluator, or will engineering/procurement/operations also be involved?"

4) Timeframe (10 sec)

"When are you looking to implement—0–3 months, 3–6, 6–12, or later?"

5) Next step lock-in (15 sec)

"Best next step: a 20-minute engineering consult, a pricing/quote review, or a plant walkthrough call. Which should we schedule?"

CONSENT VALUE EXCHANGE (required)

“To send you the spec sheet and the demo recording, I’ll email it to you—do I have your permission to follow up with those resources?”

DATA TO CAPTURE (minimum)

- Email, Company domain, Role, Use case, Product family, Timeframe, Next step date, Tier, Consent.

`

5.3 Campaign Member Status Framework (Closed-Loop Attribution)

`text

STATUS LADDER (must be standardized across all shows)

1. Visited Booth
2. Demo Completed
3. Meeting Scheduled
4. Meeting Held
5. Quote Created
6. SQL
7. Opportunity Created
8. Closed Won

RULES

- Status must only move forward (no regression).
- “Meeting Held” requires calendar confirmation.
- “Quote Created” requires CPQ/quote record link.
- SQL definition must match Sales acceptance criteria.

REPORTING

- Funnel conversion rates must be reported per status step.
- Pipeline influenced requires status $\geq$ Meeting Held.

`

5.4 Tiering + SLA Playbook (Routing Script)

`text

TIER DEFINITIONS

Tier 1: timeframe ≤ 6 months AND role in buying group (decision/influence) AND clear use case AND next step scheduled.

Tier 2: timeframe 6–12 months OR unclear buying group role but strong fit.

Tier 3: >12 months OR weak fit.

SLA

Tier 1: first human touch within 24 hours (goal: 4 hours)

Tier 2: within 72 hours

Tier 3: nurture only

ROUTING

- Territory/segment assignment rules
- Exception queue: Unmatched Account / No Domain

SEQUENCE (Tier 1 example)

Day 0: Call + email recap with booked meeting link

Day 2: Call + technical asset

Day 5: AE outreach + case study

Day 8: Call + ROI/TCO offer

Day 10: Breakup email + alternate CTA

`

5.5 Event Volatility Contingency Plan (2-Week Activation Template)

`text

TRIGGER CONDITIONS

- Event canceled/postponed
- Travel restrictions/visa issues
- Budget freeze within 30 days of event

ACTIVATION GOAL

Maintain $\geq 80\%$ of planned engagement volume within 14 days.

PLAN A: Regional Mini-Events

- 2 cities, half-day sessions
- Invite list: top 50 accounts per region
- Format: demo + engineering consult blocks

PLAN B: Branded Livestream + On-Demand Library

- 45-minute live demo + Q&A
- Breakout sessions by application
- On-demand access gated with consent

PLAN C: Customer/Partner Days

- Co-host with distributor/OEM partner
- Joint pipeline attribution agreement

MEASUREMENT

- Registrations
- Attendance rate
- Meetings booked
- Opps created within 30 days

,

6. Key Performance Indicators (KPIs)

Metric | Target (30 Days) | Target (60 Days) | Target (90 Days)

Tier-1 Leads Contacted Within 24h (%) | "e 85 % | "e 90 % | "e 95 %

Data Completeness Rate (required fields) | "e 80 % | "e 90 % | "e 95 %

Duplicate Rate (event !' CRM) | "d 8 % | "d 5 % | "d 3 %

Meetings Scheduled per Show (#) | Baseline +10% | Baseline +20% | Baseline +30%

SQL Rate from Tier-1 (%) | +10% vs baseline | +20% vs baseline | +25–30% vs baseline

Opportunities Created within 30 days (#) | +10% vs baseline | +20% vs baseline | +30% vs baseline

Quotes Created During Show (% of qualified) | "e 5 % | "e 8 % | "e 10 %

Pipeline Influenced (\$) reporting availability | Draft within 30 days | Stable within 30 days | Board-ready within 30 days

Notes:

- These targets directly align to 2026's shift from lead volume to pipeline/revenue attribution (Perenso; EMCO Outdoor) and the need to counter data decay (Demand Gen Report).

7. The X-Factor: Scaling to \$1M+ ARR

(Enterprise interpretation: scaling the TS-POS into a repeatable revenue engine that consistently produces \$1M+ in attributable annual recurring impact, or—if you commercialize it—\$1M+ ARR as a service offering.)

Team structure and first hires

- 1) Event Revenue Owner (RevOps leader) — accountable for attribution and cross-functional execution.
- 2) Marketing Ops Manager (Events) — campaign architecture, MAP workflows, reporting.
- 3) Sales Ops Analyst — routing, SLA monitoring, pipeline review facilitation.
- 4) Data Steward (shared service) — dedupe, enrichment oversight, consent audits.
- 5) Booth Commerce Specialist — CPQ/ordering workflow owner.

Systems and processes to build

- Event Factory Playbooks: cloned campaign templates, sequences, dashboards.
- Data Quality Scorecard: completeness, duplicates, consent coverage, deliverability.
- Monthly Event Pipeline Review: show-by-show performance and corrective actions.
- Content Velocity System: rapid production and optimization (Demand Gen Report).

Partnership and channel opportunities

- Distributor alignment: shared attribution rules and joint follow-up SLAs.
- Media/trade publication integration: 73% of technical buyers trust online trade publications (Finn Partners); integrate content offers and track influence.
- Hybrid sponsorship extensions: branded livestreams and on-demand libraries (EMCO Outdoor) to extend engagement year-round.

Capital requirements and funding options

- Typically funded from event budget reallocation:
- Shift 3–8% of spend into TS-POS tooling + ops.
- Business case: budget protection via board-ready ROI proof and reduced waste from poor data.

8. Common Pitfalls & How to Avoid Them

- Pitfall 1: Treating the show like a lead dump -> Solution: Enforce tiering + next step required; measure pipeline influenced and revenue attributed (Perenso; EMCO Outdoor).
- Pitfall 2: No in-booth commerce capability -> Solution: Implement booth quote workflow + inventory visibility snapshot; train commerce specialists (Perenso).
- Pitfall 3: Data decay and duplicates destroy follow-up -> Solution: Required fields, domain matching, data steward queue, quarterly enrichment (Demand Gen Report).
- Pitfall 4: Slow follow-up -> Solution: Pre-built routing + sequences; Tier-1 SLA 24h (goal 4h).
- Pitfall 5: Inconsistent campaign statuses break attribution -> Solution: Standard status ladder and locked naming conventions.
- Pitfall 6: Event cancellation creates pipeline gaps -> Solution: 2-week contingency activation plan; flexible terms (EMCO Outdoor).
- Pitfall 7: Content is generic and not optimized -> Solution: Persona/application tracks + rapid content iteration (Demand Gen Report).

9. Immediate Action Checklist

Do These 5 Things in the Next 60 Minutes:

- [] Action 1: Create and share the Event Scoreboard Spec doc (Template 5.1) with Sales + Marketing leaders for approval.
- [] Action 2: Draft your required field schema (email + company domain + use case + timeframe + next step + consent) and mark which fields will be picklists.
- [] Action 3: Define Tier 1/2/3 criteria and set the Tier-1 SLA = 24 hours (goal 4 hours) in writing.
- [] Action 4: Choose your lead capture platform for the next show and schedule a 30-minute integration test with CRM admin.
- [] Action 5: Assign a named Data Steward for the next show and create an “Unmatched Account” queue in

CRM.

- How to get support:

- Run a 2-hour working session with Sales Ops + Marketing Ops to finalize the schema, statuses, and SLA.
- Schedule a pre-show “dry run” with booth staff using real devices and test records.
